Étude théorique – Analyser, Modéliser, Résoudre – Portail ABB

l'Ingénieur

Modélisation cinématique et paramétrage

On a:

- $\overrightarrow{OA} = a \overrightarrow{x_1}$; $\overrightarrow{AB} = b \overrightarrow{x_2}$;

Résolution de la loi Entrée/Sortie

Fermeture géométrique:

$$\overrightarrow{OA} + \overrightarrow{AB} + \overrightarrow{BC} + \overrightarrow{CO} = \overrightarrow{0} \iff a \overrightarrow{x_1} + b \overrightarrow{x_2} - c \overrightarrow{x_3} + d \overrightarrow{x_0} + e \overrightarrow{y_0} = \overrightarrow{0}$$

$$\iff a \left(\cos \theta_1 \overrightarrow{x_0} + \sin \theta_1 \overrightarrow{y_0}\right) + b \left(\cos \theta_2 \overrightarrow{x_1} + \sin \theta_2 \overrightarrow{y_1}\right) - c \left(\cos \theta_4 \overrightarrow{x_0} + \sin \theta_4 \overrightarrow{y_0}\right) + d \overrightarrow{x_0} + e \overrightarrow{y_0} = \overrightarrow{0}$$

$$\iff a \left(\cos \theta_1 \overrightarrow{x_0} + \sin \theta_1 \overrightarrow{y_0}\right) + b \left(\cos \theta_2 \left(\cos \theta_1 \overrightarrow{x_0} + \sin \theta_1 \overrightarrow{y_0}\right) + \sin \theta_2 \left(\cos \theta_1 \overrightarrow{y_0} - \sin \theta_1 \overrightarrow{x_0}\right)\right)$$

$$-c \left(\cos \theta_4 \overrightarrow{x_0} + \sin \theta_4 \overrightarrow{y_0}\right) + d \overrightarrow{x_0} + e \overrightarrow{y_0} = \overrightarrow{0}$$

En projetant les équations sur $\overrightarrow{x_0}$ et sur $\overrightarrow{y_0}$, on a :

$$\begin{cases} a\cos\theta_1 + b\cos\theta_2\cos\theta_1 - b\sin\theta_2\sin\theta_1 - c\cos\theta_4 + d = 0\\ a\sin\theta_1 + b\cos\theta_2\sin\theta_1 + b\sin\theta_2\cos\theta_1 - c\sin\theta_4 + e = 0 \end{cases}$$

Fermeture angulaire:

$$\left(\overrightarrow{x_0}; \overrightarrow{x_1}\right) + \left(\overrightarrow{x_1}; \overrightarrow{x_2}\right) + \left(\overrightarrow{x_2}; \overrightarrow{x_3}\right) + \left(\overrightarrow{x_3}; \overrightarrow{x_0}\right) = 0 \Longleftrightarrow \theta_1 + \theta_2 + \theta_3 - \theta_4 = 0$$
